Experiment 2

Study of different types of network cables and crimping of cable with RJ45 connector

AIM:

To study different types of network cables and to prepare a straight through and cross over Ethernet cable by crimping RJ45 connectors

REQUIREMENTS:

VIP cable / Cat6 cable, RJ45 connectors, crimping tool, cable stripper, cable tester, scissors.

Cable types:

1) UTP → unshield twisted pair (UTP)
   category 3 - 10 mbps
   category 5 - upto 100 mbps
   category 5e - upto 1 gbps

2) STP → shield twisted pair (STP) cable category 6 upto 10 Gbps SSTP : category 7 - upto 10 Gbps

3) coaxial cable
   RG-6, RG-59, RG-11
   max data transmission 10 - 100 mbps

crimping of network cable with RJ45 connector

RJ45

1 wire
2. white green
3 Green
4 white orange
5 Blue
6 white Blue
7 Orange
8 Brown

4) fibre optics cable.

single mode multimode
max data transmission - 100 Gbps

PROCEDURE:

1) To start connector of the device begin by threading
2) next, strip approximately 1.5 cm of cable shielding from both ends the crimping tools has a rounded area to complete this task.
3) After you will need to untangle the be four twisted pairs
4) once the order is correct, bunch them togethers in line
5) To test it plug it in and attempt to connect two devices directly.

RESULT:
Thus the types of network cables are decided and crimped the cable with RJ45 connector is successfully written.
